Collected: 10/01/2026  Reported: 10/02/2026

## CT CHEST WITHOUT CONTRAST

Sample radiology report for the FollowThrough Health demo. Made-up patient: Maria, 54.

CLINICAL HISTORY: Cough for 3 weeks.

FINDINGS: There is a 5 mm solid nodule in the right upper lobe. No pleural effusion. No lymphadenopathy. Mild atelectasis at both lung bases. The heart is normal in size.

## IMPRESSION:

1. 5 mm right upper lobe pulmonary nodule, likely benign.
2. Mild bibasilar atelectasis.
3. No pleural effusion.

Follow-up chest CT in 12 months is recommended.
